

Slot management that is comprehensive, accurate, efficient and IATA-standard

# Sabre AirVision Slot Manager IATA

## Do You Have The Slots You Need?

It's getting harder and harder to get the slots you need at fully coordinated airports, especially during peak times. If you operate at one of these airports, it is critical that you apply for and get the slots you need to operate.

The changing commercial environment drives changes in your schedule. You must quickly determine what impact such changes have on your slots, accurately request slot changes as needed and be able to quickly determine if there is any mismatch between your schedule and the slots you hold.

## Getting The Most Out Of Your Slot Portfolio

Through the many phases of the slot management cycle, you must manage your slot portfolio, according to IATA standards.

With Sabre® AirVision™ Slot Manager IATA, you can efficiently manage your slot assets through the phases. This includes maximizing use of your historic slots as you plan for a new season and applying for slots using the IATA standard. *Slot Manager* helps you manage slot changes without wasting any available slots as schedules change. And, as changes happen, *Slot Manager* will help you to avoid losing historic slots for the next year.

Figure 1 Sabre AirVision Slot Manager IATA helps you quickly identify your slot problems and ask for changes as needed.

**Slot Portfolio Management** Manages slots as a corporate portfolio. Additionally, depending on the stage of the business process you are in, slots are managed either as historic slots, planned schedule slots, slots for current operations or slots tracked for usage for future season historic slots.

## Features

Sabre® AirVision™ Slot Manager IATA ensures that all required slots are requested in a way that both schedule development and slot management are well synchronized. Using the system you can:

- Manage a portfolio of historic slot assets,
- Identify slot requirements for a future schedule,
- Compare historic slots with schedule requirements,
- Identify unused slots and flights that do not have suitable slot clearances,
- Track and modify the status of slots,
- Generate and send initial submissions and change requests in IATA standard formats,
- Log all requests sent,
- Track slot utilization percentages,
- Track, view and automatically process coordinator responses.

## Benefits

**Preventing Errors** Ensures slot requests are complete and accurate according to IATA standards. It minimizes the chances of losing valuable historic slot rights.

**Increased Productivity** Dramatically reduces the time required to compute slot needs and generate slot requests. Automates management of historic slots and slot changes.

**Fast Response To Rescheduling** Quickly evaluates alternatives by reacting to major commercial or operation-driven schedule changes and automatically generating slot change requests.

**Competitive Advantage** Provides tools to quickly identify potential slot problems, enabling faster reaction time than competitors. Additionally, it improves the usage of your slot assets resulting in more efficient use of valuable resources. Several tools in the system support competitive analysis using coordinator data.

**Portability** Offers independent on-site use at IATA conferences without requiring a link to the airlines database at home base.

## Our Unique Experience

At Sabre Airline Solutions®, our team of experts is ready to help power your progress by lowering your costs and generating more revenue for your airline. And with our comprehensive portfolio, you can market your experience, sell your product, serve your customers and operate efficiently across your entire airline.
