

Comprehensive electronic flight bag solution that connects the aircraft and core ground systems

Sabre AirCentre eFlight Manager

Electronic Flight Bag

Technology onboard aircraft has steadily advanced over the past several years to the point that virtually every major component of the aircraft is monitored. Yet paper continues to be present inside the cockpit in the form of checklists, flight plans, aircraft operations manuals and airport approach procedures — all part of the pilot's flight bag.

Electronic Flight Bag (EFB) brings technology to the flight deck that can replace the pilot's physical flight bag with a laptop, tablet, or a device that is affixed or built into the aircraft's onboard avionics system. From simple solutions such as soft copies of required manuals to more complex solutions like real-time weather displays, electronic approach plates and airfield diagrams, the capabilities of the EFB continue to grow every day.

Comprehensive EFB Solution Software · Consulting · Program Management

The *Sabre® AirCentre™ eFlight Manager* leverages our expertise in airline operations, software development, consultative processes and program management to provide you with a comprehensive EFB solution.

With **new software capabilities**, *eFlight Manager* effectively links and consolidates data-rich aircraft information directly to the airline's IT networks and core ground systems to automate and streamline communication processes and documentation. Our software's extensive capabilities include a central data repository, documents and notices, flight folder, weight & balance, maintenance and defects reporting, and an interactive flight log.

Implementing software alone is not enough. Solution consulting and program management are equally critical to a successful EFB program. *Sabre Airline Solutions*[®] incorporates both with or industry-leading software to ensure your EFB transformation is seamless.

Our Electronic Flight Bag Approach

To get started, we will conduct a thorough analysis of your processes and procedures, to determine how they can be efficiently transformed with a comprehensive EFB solution. We work closely with your airline personnel and leverage our industry expertise to determine the best solution to meet your unique business needs. After determining the optimal solution strategy, we will help you deploy the solutions throughout your enterprise.

Benefits Of An Electronic Flight Bag

eFlight Manager enables airlines to automate and streamline processes for communications and documentation between the aircraft and the ground systems, ultimately reducing costs by:

- Linking and consolidating data-rich aircraft directly into an airline's IT networks and core ground systems
- Capturing a wealth of data from the aircraft and integrating it into other company systems in near real-time without human intervention
- Accessing data effortlessly in an easy-to-use format
- Improving gate-turn performance while efficiently delivering the right information to the crew
- Communicating mechanical issues clearly to determine course of action

Reduce Your Costs

With an EFB solution, the industry average cost reduction for migrating from paper-based to a paperless process is in excess of US\$100,000 per year per aircraft. When you partner with us, we work to ensure you implement not only the best solution for your needs, but help you maximize your cost reductions.

Our Unique Experience

As a complete business partner, *Sabre Airline Solutions* provides comprehensive technology solutions that give airlines the freedom to better market their airline, sell their products, serve their customers and efficiently operate the way they want.
